I-Suite Patch 2007-6 Release Notes

Date: December 20, 2007
Version: I-Suite 7.01.06

Description: The primary focus of this release is to add additional security measures when creating a repository file. These measures are accomplished automatically when creating a repository file and require no additional action by the user.

Things to know prior to installing I-Suite 7.01.06

- Includes all previous patches released since I-Suite version 7.01.01.

- Recommend that this patch be installed on all computers running I-Suite 7.01.01 with or without previous patches.

- This patch can be applied to a server or client installation of I-Suite.

- System Administrative privileges are NOT required to properly install this patch.

- This patch can be installed mid-incident.

- Close the I-Suite application and all related windows on the local computer before installing this patch.

- The installation of I-Suite version 7.01.06 will replace all report files (*.rpt) and the ISuite.exe file.

- It is recommended to back-up the I-Suite database prior to any application updates.

Note: If the current installed version is 7.01.04 or earlier, the user's ini file located in "c:\Program Files\ISuite\User_Profiles" folder must be deleted for the new supply column to display in the Demob module.
